## DETAILED ACTION

### *Election/Restrictions*

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species 1 – an absorbent composition with a water–swellable, water–insoluble absorbent material, a basic cooling compound with an endothermic effect, an absorbent capacity of at least 10 grams of 0.9 wt% NaCl and a cooling effect of at least 2°C reduction in temperature.

Species 2 – an absorbent composition comprising a water–swellable, water–insoluble acidic absorbent material, a cooling compound with an endothermic effect, an absorbent capacity of at least 10 grams of 0.9 wt% NaCl and a cooling effect of at least 2°C reduction in temperature.

Species 3 – an absorbent composition comprising a water–swellable, water–insoluble basic absorbent material, an acidic cooling compound with an endothermic effect, an absorbent capacity of at least 10 grams of 0.9 wt% NaCl and a cooling effect of at least 2°C reduction in temperature.

Species 4 – a disposable absorbent article comprising a topsheet, backsheet and absorbent composition therebetween comprising a water–swellable, water–insoluble, a cooling compound with an endothermic effect, an absorbent capacity of at least 10 grams of 0.9 wt% NaCl and a cooling effect of at least 2°C reduction in temperature.

Art Unit: 3761

Species 5 – a disposable absorbent article with a first net endothermic portion and a second net exothermic hydration portion.

Species 6 - an absorbent composition comprising a superabsorbent having an exothermic heat of hydration, a net cooling effect and an absorbent capacity of at least 10 grams of 0.9 wt% NaCl.

Species 7 – a method of provoking a child to recognize urination by reducing the temperature of an absorbent article.

Species 8 – an endothermic absorbent composition comprising a superabsorbent material and a cooling compound.

Species 9 – an absorbent composition comprising a superabsorbent material having an exothermic heat of hydration and a cooling compound having an endothermic effect.

A telephone call was made to Randall Fieldhack on October 13, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Art Unit: 3761

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
